

Investor Profile

For investors seeking to diversify their investments in companies within developing countries which, in the judgment of the Sub-Adviser, have the potential of superior growth.

Investment Strategy

The Fund's Sub-Adviser seeks to achieve the Fund's investment objective versus the MSCI Emerging Markets Index Net by investing primarily in emerging market equity securities traded on foreign stock exchanges.

Fund Objective

The Fund seeks to maximize capital appreciation.

Mr. Coffey joined NS Partners in 1988 and is responsible for research and stock selection in Latin America and Africa. He became Co-Head of emerging markets in 1998. Mr. Coffey received a B.Sc., General Science, from University College, Galway and a B.Sc., Financial Economics, from the University of London.

Oliver Adcock
Investment Manager Emerging Europe
Mr. Adcock joined NS Partners in September 2007 from Accenture, where he worked in their capital markets strategy consulting division. Mr. Adcock has responsibility for European stock selection, evaluating both developed and emerging Europe. Mr. Adcock holds a Master of Chemistry, Chemistry, from New College, University of Oxford.

PRINCIPAL INVESTMENT RISKS

Emerging Markets Risk – Emerging market countries may have relatively unstable governments, weaker economies, and less-developed legal systems which do not protect securities holders. Emerging market economies may be based on only a few industries and security issuers may be more susceptible to economic weakness and more likely to default. Emerging market securities also tend to be less liquid.

Foreign Investing Risk – Investments in foreign countries are subject to currency risk and country

specific risks such as political, diplomatic, regional conflicts, terrorism, war, social and economic instability, and policies that have the effect of decreasing the value of foreign securities. Foreign countries may be subject to different trading settlement practices, less government supervision, less publicly available information, limited trading markets and greater volatility than U.S. investments.

Stock Market Risk – Stock markets can be volatile. In other words, the prices of stocks can fall rapidly in response to developments affecting a specific company or industry, or to changing economic, political or market conditions. The Fund's investments may decline in value if the stock markets perform poorly.

Risk of Investing in Asia – The value of the Fund's assets may be adversely affected by political, economic, social and religious instability; inadequate investor protection; changes in laws or regulations of countries within the Asian region (including countries in which the Fund invests, as well as the broader region); international relations with other nations; natural disasters; corruption and military activity. The Asian region, and particularly China, Japan and South Korea, may be adversely affected by political, military, economic and other factors related to North Korea. In addition, China's long-running conflict over Taiwan, border disputes with many of its neighbors and historically strained relations with Japan could adversely impact economies in the region. The economies of many Asian countries differ from the economies of more developed countries in many respects, such as rate of growth, inflation, capital reinvestment, resource self-sufficiency, financial system stability, the national balance of payments position and sensitivity to changes in global trade.

Information Technology Sector Risk – Investments in technology companies exposed to special risks, such as rapid advances in technology that might cause existing products to become obsolete. Companies in a number of technology industries are also subject to more government regulations and approval processes than many other industries. This fact may affect a company's overall profitability and cause its stock price to be more volatile. Additionally, technology companies are dependent upon consumer and business acceptance as new technologies evolve.
Currency Risk – Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from the Fund's investments denominated in a foreign

currency or may widen existing losses. Exchange rate movements are volatile and it may not be possible to effectively hedge the currency risks of many countries.

Natural Disaster/Epidemic Risk – Natural or environmental disasters, such as earthquakes, fires, floods, hurricanes, tsunamis, and other severe weather-related phenomena generally, and widespread disease and illness, including pandemics and epidemics (such as the novel coronavirus), have been and can be highly disruptive to economies and markets.

Liquidity Risk – Some securities may have few market-makers and low trading volume, which tend to increase transaction costs and may make it impossible for a Fund to dispose of a security position at all or at a price which represents current or fair market value.

Management Risk – The Fund is subject to management risk because it is an actively managed investment portfolio. The Sub-Adviser will apply its investment techniques and risk analyses in making investment decisions for the Fund, but there is no guarantee that its decisions will produce the intended result. The successful use of hedging and risk management techniques may be adversely affected by imperfect correlation between movements in the price of the hedging vehicles and the securities being hedged.

Securities Lending Risk – The risk of securities lending is that the financial institution that borrows securities from the Fund could go bankrupt or otherwise default on its commitment under the securities lending agreement and the Fund might not be able to recover the loaned securities or their value.

FUND CHARACTERISTICS DEFINITIONS

Max Drawdown: The largest consecutive monthly decline, measured by magnitude.

RISK CHARACTERISTICS DEFINITIONS

The 10-Year Standard Deviation is annualized and measures the average deviations of a series of monthly returns from its mean and is often used as a measure of risk.

Sharpe Ratio: Measures the incremental assumed return provided by the fund for taking additional risk above risk-free rate. Higher values of the Sharpe Ratio are generally desirable.

Disclosures

Investors should consider the investment objectives, risk factors, charges, and expenses of the Dunham Funds carefully before investing. This and other important information is contained in the Fund's summary prospectus and/or prospectus, which may be obtained by contacting your financial advisor, or by calling (800) 442-4358. Please read prospectus materials carefully before investing or sending money. Investing involves risk, including possible loss of principal.

The MSCI Emerging Markets Index (Net) is a free float-adjusted market capitalization index that is designed to measure equity market performance in the global emerging markets. Investors cannot invest directly in an index or benchmark.

Investors cannot invest directly in an index or benchmark.

Allocations are presented to illustrate

examples of the securities, regions, and sectors in which the Fund may invest. Because they are presented as of the dates indicated and change from time to time, they may not be representative of the Fund's current or future investments or allocations. Top 10 Holdings do not include money market investments.

Performance figures shown for N-shares only. Past performance does not guarantee future results. Investment return and principal value of an investment will fluctuate, and shares, when redeemed, may be worth more or less than their original cost. Performance may vary for other share classes. The Fund's performance is subject to change since quarter's end and may be lower or higher than the performance data shown.
