

Floating Rate Bond Fund (DNFRX)

Sub-Adviser

PineBridge Investments LLC

Investment Objective

The investment objective of the Fund is to provide a high level of current income with capital appreciation as a secondary goal.

Sub-Adviser Background

PineBridge Investments LLC (PineBridge) is a global asset manager with experience in emerging and developed markets, and investment capabilities in multi-asset, fixed income, equities and alternatives. PineBridge is differentiated by the integration of on-the-ground investment teams of professionals, providing investors with the combined benefits of global fundamental perspectives and analytical insights.

Asset Class Recap

Floating-rate bonds had a volatile but constructive fiscal quarter, as loan prices rose outside select sectors. During the period, investors remained cautious about credits facing AI-related risks and exposure to elevated commodity prices; however, away from those credits, the rally in loan prices accelerated, with the percentage of the market trading above par increasing to just under 40 percent over the fiscal quarter. With a tentative ceasefire in the Middle East in place, risk assets continued to trade in expectation of a resolution to the conflict and normalization of energy flows through the Strait of Hormuz. As a result, rising inflation measures were discounted, along with signs of pressure on some consumers from higher US gas prices, especially as the labor market continues to exhibit relative stability. Over the fiscal quarter, floating rate bonds, as measured by the Morningstar LSTA US Leveraged Loan 100 Index, rose 1 percent, while securitized asset pools, known as collateralized loan obligations (CLO), as measured by the Palmer Square CLO Debt Index, added 0.5 percent. Meanwhile, floating rate bonds outperformed high-yield bonds, as measured by the ICE BofA U.S. Cash Pay High-Yield Index, which rose 0.7 percent.

Allocation Review

The Fund continued to primarily hold floating rate securities, which were predominantly comprised of bank loans and CLOs. In aggregate, the Fund held approximately 89 percent

in these two categories, with nearly 6 percent allocated to CLOs and over 83 percent allocated to bank loans. The Fund's allocation to loans contributed to absolute Fund performance over the most recent period from a location and credit selection perspective. The Fund also had approximately 11 percent allocated to fixed coupon high-yield corporate bonds, which contributed to Fund performance over the fiscal quarter. The Fund's largest credit quality exposure was in the single-B space, as the Fund had over 63 percent exposure versus 72 percent in the Morningstar LSTA US Leveraged Loan 100 Index. Elsewhere on the credit quality range, the Fund maintained a slightly higher allocation to CCC-rated securities versus the index, and the Fund's exposure to BBB-rated bank loans was also underweight versus the benchmark index, as the Fund had just over 1 percent exposure allocated to BBB-rated loans, and the benchmark index had over 4 percent. The largest sector overweights were in energy, materials, and media and entertainment, while the Fund's largest underweight was in software and services. The Fund did not have any exposure to derivatives during the three-month period that meaningfully affected performance.

Holdings Insights

The most significant exposure within the Fund was the allocation to variable-rate securities, and some of the best-performing positions over the fiscal quarter were from this allocation. Rackspace Finance, LLC Floating Rate, Due 05/15/2028 (BL4606234) (holding weight*: 0.35 percent),

Floating Rate Bond Fund (DNFRX)

provides cloud computing and IT managed services as the price of this loan rose 84.2 percent following the announcement that the Rackspace, with a partner, launched the UK Sovereign Cyber Recovery Cloud, a ransomware recovery solution keeping hardware, data, and administrative delivery access inside the UK. The company also announced another strategic partnership to deliver an infrastructure-to-agent architecture aimed at unlocking \$100 million in enterprise AI deployments. Other loans that positively contributed to Fund performance over the fiscal quarter was PAI Holdco, Inc. Floating Rate, Due 10/28/2027 (BL3606284) (holding weight*: 0.35 percent), a holding company for Parts Authority, a large distributor of aftermarket automotive parts for both professional and DIY customers, and Consolidated Energy Finance S.A. Floating Rate, Due 11/08/2030 (BL4578458) (holding weight*: 0.36 percent), one of the world's largest methanol and fertilizer producers. Over the fiscal quarter, the price of these loans rose 7.6 percent and 10.1 percent, respectively. Contributors also came from the fixed-coupon high-yield corporate bond exposure. For example, Mobius Merger Sub, Inc. 9%, Due 06/01/2030 (606950AA1) (holding weight*: 0.16 percent) rallied 18.5 percent as the company entered into a merger agreement.

Elsewhere, headlines about new AI-powered tools raised questions about the technology's potential impact on software providers' business models, which contributed to a selloff in the sector and dragged the broader index into negative territory. Software and services is the largest constituent sector in the broader index, and although the Fund was meaningfully underweight the sector and further decreased this exposure during the fiscal quarter, positions within this sector detracted from Fund performance. This includes, Project Alpha Intermediate Holding, Inc. Floating Rate, Due 11/22/2032 (BL4806313) (holding weight*: 0.20 percent), a designer and developer of software solutions fell 24 percent. Another software loan that detracted from Fund performance was Dcert Buyer, Inc. Floating Rate, Due 02/16/2029 (BL3559079) (holding weight*: 0.05 percent), a provider of digital software solutions. This loan sold off 12.2 percent despite a strong earnings result, as pressure on the industry outweighed the impressive result. Within the exposure to CLOs, the positions

in the Bain Capital Credit CLO 2021-7 Ltd. Floating Rate, Due 01/22/2035 (05682JAE2) (holding weight*: 1.12 percent) and BlueMountain CLO XXXIII Ltd. Floating Rate, Due 10/20/2038 (09631AAE5) (holding weight*: 1.38 percent) detracted from Fund performance as they fell in price by 6.8 percent and 4.2 percent, respectively.

Sub-Adviser Outlook

The Sub-Adviser believes that the outlook for bank loans remains unchanged, though uncertainty is elevated. Expectations are for the current ceasefire to hold, with President Trump favoring a diplomatic resolution rather than a resumption of hostilities. However, no clear framework for a lasting peace has emerged, and traffic through the Strait of Hormuz remains at a standstill. The Sub-Adviser believes that economic conditions are likely to begin softening in the absence of normalization in energy flows over the medium term, with government efforts to date unlikely to mitigate these headwinds for a prolonged period. While AI-driven volatility has eased for now, it could persist if the technology continues to advance. Tariff uncertainty has moved to the back burner but could still pose headwinds for certain businesses.

Against this backdrop, the Sub-Adviser views US economic conditions as relatively stable, supported by a resilient labor market, elevated investment by hyperscalers, and the country's position as a net energy exporter. Measures of distress in the syndicated loan market trended lower towards the end of the fiscal quarter, with the percentage of the market trading below 80, a leading indicator of potential distress, also declining. Technical conditions should remain balanced in the near term, with macro uncertainty weighing on issuance volumes, though CLO demand could provide incremental support if equity returns improve. Broadly syndicated loan yields should remain elevated, with the Federal Reserve unlikely to cut rates ahead of a potential inflationary impulse from higher energy prices, even as core inflation remains more stable. In addition, the Sub-Adviser is confident that the asset class should continue to offer a hedge against further rate volatility.

* Holdings percentage(s) of total investments, cash and unsettled trades excluding collateral for securities loaned as of 4/30/2026.

Floating Rate Bond Fund (DNFRX)

Index Definitions

ICE BofA BB US Cash Pay High Yield Index - The index contains all bonds in the ICE BofA US Cash Pay High Yield Constrained Index (the "Underlying Index") that are rated BB1 through BB3, based on an average of Moody's Investors Services, Inc. ("Moody's"), S&P Global Ratings ("S&P") and Fitch Ratings, Inc. ("Fitch"), but caps issuer exposure at 2%.

ICE BofA CCC and Lower US Cash Pay High Yield Index - The index tracks the performance of US dollar denominated below investment grade corporate debt publicly issued in the US domestic market.

Morningstar LSTA US Leverage Loan 100 Index - The Morningstar LSTA US Leveraged Loan 100 Index is designed to measure the performance of the 100 largest facilities in the US leveraged loan market. Index constituents are market-value weighted, subject to a single loan facility weight cap of 2%.

Palmer Square CLO Debt Index - The Palmer Square CLO Debt Index is designed to reflect the investable universe of U.S CLO mezzanine original rated A, BBB and BB debt issued after Jan 1, 2011.

Investors cannot invest directly in an index or benchmark.

"Top 10 Holdings" are presented to illustrate examples of the securities in which the Fund may invest. Because they are represented as of the dates indicated and change from time to time, they may not be representative of the Funds' current or future investments. Top 10 Holdings do not include cash or money market investments.

Additional Disclosures

Investing in a mutual fund involves risks, including the possible loss of principal. Investors should consider the investment objectives, risks, charges and expenses of the Dunham Funds carefully before investing. For this and other important information about the Dunham Funds, please speak to your financial advisor or call us at (800) 442-4358 to request a current summary prospectus and/or prospectus and read it carefully before investing.

Primary Risks of the Dunham Mutual Funds

Active Management Risk – The Fund is subject to management risk because it is an actively managed investment portfolio. The Sub-Adviser will apply its investment techniques and risk analyses in making investment decisions for the Fund, but there is no guarantee that its decisions will produce the intended result. The successful use of hedging and risk management techniques may be adversely affected by imperfect correlation between movements in the price of the hedging vehicles and the securities being hedged.

Asset Allocation Risk – In allocating the Fund's assets, the Sub-Adviser may favor markets or asset classes that perform poorly relative to other markets and asset classes. The Sub-Adviser's investment analysis, its selection of investments, and its assessment of the risk/return potential of asset classes and markets may not produce the intended results and/or can lead to an investment focus that results in the Fund underperforming other funds with similar investment strategies and/or underperforming the markets in which the Fund invests.

Call or Redemption Risk – If interest rates decline, issuers of debt securities may exercise redemption or call provisions. This may force the Fund to reinvest redemption or call proceeds in securities with lower yields, which may reduce Fund performance.

Changing Fixed Income Market Conditions Risk – During periods of sustained rising rates, fixed income risks will be amplified. If the U.S. Federal Reserve's Federal Open Market Committee ("FOMC") raises the federal funds interest rate target, interest rates across the U.S. financial system may rise. Rising rates tend to decrease liquidity, increase trading costs, and increase volatility, all of which make portfolio management more difficult and costly to the Fund and its shareholders.

China Related Variable Interest Entity Risk – The Fund could seek to gain economic exposure to certain operating companies in China through legal structures known as variable interest entities ("VIEs"). In a VIE structure, a series of contractual arrangements are entered

into between a holding company domiciled outside of China and a Chinese operating company or companies. VIE structures and these contractual arrangements are not equivalent to equity ownership in the operating company, which presents additional risks. The market value and liquidity of the associated investments could fall, causing substantial or total investment losses for investors with no recourse available.

China Risk – The Fund's investments in companies or issuers economically tied to China are subject to the country/regional, emerging markets, currency, cybersecurity, and geopolitical risks, in addition to unique risks. They are associated with considerable degrees of social and humanitarian, legal, regulatory, political, and economic uncertainty which could have negative impacts on the Fund. They may be (or become in the future) restricted or sanctioned by the U.S. government or another government.

CLO Risk – Negative economic trends nationally as well as in specific geographic areas of the United States could result in an increase in loan defaults and delinquencies. There is a material possibility that economic activity will be volatile or will slow significantly, and the CLO performance will likely be significantly and negatively impacted by such conditions. Such effects may include an inability for Obligor to obtain refinancing of their debt obligations. A decreased ability of Obligor to obtain refinancing may cause a deterioration in loan performance generally and for CLOs. It is not possible to determine whether or when such trends will improve or worsen in the future. CLOs may include underlying securities, which are investments in foreign countries. These factors could detract from CLO's performance.

Commodity Risk – Investing in the commodities markets may subject the Fund to greater volatility than investments in traditional securities. Commodity prices may be influenced by unfavorable weather, animal and plant disease, geological and environmental factors as well as changes in government regulation such as tariffs, embargoes or burdensome production rules and restrictions.

Corporate Loans Risk — Derivatives or other similar instruments (referred to collectively as "derivatives"), such as futures, forwards, options, swaps, structured securities and other instruments, are financial contracts whose value depends on, or is derived from, the value of an underlying asset, reference rate or index. Derivatives may involve costs and risks that are different from, or possibly greater than, the costs and risks associated with investing directly in securities and other traditional investments. Derivatives prices can be vola-

Additional Disclosures

tile, may correlate imperfectly with price of the applicable underlying asset, reference rate or index and may move in unexpected ways, especially in unusual market conditions, such as markets with high volatility or large market declines. Some derivatives are particularly sensitive to changes in interest rates. Other risks include liquidity risk which refers to the potential inability to terminate or sell derivative positions and for derivatives to create margin delivery or settlement payment obligations for the Fund. Further, losses could result if the counterparty to a transaction does not perform as promised. Derivatives that involve a small initial investment relative to the risk assumed may be considered to be "leveraged," which can magnify or otherwise increase investment losses. In addition, the use of derivatives for non-hedging purposes (that is, to seek to increase total return) is considered a speculative practice and may present an even greater risk of loss than when used for hedging purposes. Derivatives are also subject to operational and legal risks.

Credit Risk – Issuers of debt securities may suffer from a reduced ability to repay their interest and principal obligations. They may even default on interest and/or principal payments due to the Fund. An increase in credit risk or a default will cause the value of Fund debt securities to decline. Issuers with lower credit quality are more susceptible to economic or industry downturns and are more likely to default.

Currency Risk – Adverse changes in currency exchange rates (relative to the U.S. dollar) may erode or reverse any potential gains from the Fund's investments denominated in a foreign currency or may widen existing losses. Exchange rate movements are volatile, and it may not be possible to effectively hedge the currency risks of many countries.

Derivatives Risk – Derivatives or other similar instruments (referred to collectively as "derivatives"), such as futures, forwards, options, swaps, structured securities and other instruments, are financial contracts whose value depends on, or is derived from, the value of an underlying asset, reference rate or index. Derivatives may involve costs and risks that are different from, or possibly greater than, the costs and risks associated with investing directly in securities and other traditional investments. Derivatives prices can be volatile, may correlate imperfectly with price of the applicable underlying asset, reference rate or index and may move in unexpected ways, especially in unusual market conditions, such as markets with high volatility or large market declines. Some derivatives are particularly sensitive

to changes in interest rates. Other risks include liquidity risk which refers to the potential inability to terminate or sell derivative positions and for derivatives to create margin delivery or settlement payment obligations for the Fund. Further, losses could result if the counterparty to a transaction does not perform as promised. Derivatives that involve a small initial investment relative to the risk assumed may be considered to be "leveraged," which can magnify or otherwise increase investment losses. In addition, the use of derivatives for non-hedging purposes (that is, to seek to increase total return) is considered a speculative practice and may present an even greater risk of loss than when used for hedging purposes. Derivatives are also subject to operational and legal risks.

Distribution Policy Risk – The Fund's distribution policy is not designed to generate, and is not expected to result in, distributions that equal a fixed percentage of the Fund's current net asset value per share. Shareholders receiving periodic payments from the Fund may be under the impression that they are receiving net profits. However, all or a portion of a distribution may consist of a return of capital (i.e., from your original investment). Shareholders should not assume that the source of a distribution from the Fund is net profit. Shareholders should note that return of capital will reduce the tax basis of their shares and potentially increase the taxable gain, if any, upon disposition of their shares.

ETF Risk – ETFs are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in ETFs and may be higher than other mutual funds that invest exclusively in common stocks. The ETFs in which the Fund invests will not be able to replicate exactly the performance of the indices they track and the market value of ETF shares may differ from their net asset value.

ETFs are subject to specific risks, depending on the nature of the fund. For instance, investing in inverse ETFs is similar to holding various short positions, or using a combination of advanced investment strategies to profit from falling prices. When the value of ETFs held by the Fund decline, the value of your investment in the Fund declines.

ETN Risk – ETNs are securities that combine aspects of a bond and an ETF. ETN returns are based upon the performance of a market index or other reference asset less fees, and can be held to maturity as a debt security. ETNs are traded on a securities exchange. Their value is based on their reference index or strategy and the credit

Additional Disclosures

quality of the issuer. Because ETNs are debt instruments of the issuer of the ETN, they are subject to the credit risk of the issuer. ETNs are also subject to the risk that they may trade at a premium or discount to value attributable to their reference index. When the Fund invests in an ETN, shareholders of the Fund bear their proportionate share of the ETN's fees and expenses, as well as their share of the Fund's fees and expenses. There may also not be an active trading market available for some ETNs. Additionally, trading of ETNs may be halted and ETNs may be delisted by the listing exchange.

Emerging Markets Risk – Emerging market countries may have relatively unstable governments, weaker economies, and less-developed legal systems which do not protect securities holders. Emerging market economies may be based on only a few industries and security issuers may be more susceptible to economic weakness and more likely to default. Emerging market securities also tend to be less liquid.

Event Risk - Event risk is the risk that corporate issuers may undergo restructurings, such as mergers, leveraged buyouts, takeovers, or similar events financed by increased debt. As a result of the added debt, the credit quality and market value of a company's bonds and/or other debt securities may decline significantly.

Financial Services Sector Risk - The profitability of many types of financial services companies may be adversely affected in certain market cycles. For example, periods of rising interest rates may restrict availability and increase the cost of capital for these companies. Moreover, when interest rates rise, the value of securities issued by many types of financial services companies generally falls. Declining economic conditions may cause credit losses due to financial difficulties of borrowers. In addition, financial services companies often are regulated by governmental entities, which can increase costs for new services or products and make it difficult to pass increased costs on to consumers. In certain areas, deregulation of financial services companies has resulted in increased competition and reduced profitability.

Floating Interest Rates Risk - Certain of the Fund's investments, payment obligations and financing terms may be based on floating interest rates, such as the Euro Interbank Offer Rate ("EURIBOR"), the Sterling Overnight Interbank Average Rate ("SONIA"), the Secured Overnight Financing Rate ("SOFR") and other similar types of reference rates ("Reference Rates"). The elimination of a Reference Rate or any other changes or reforms to the determination or supervision

of Reference Rates could have an adverse impact on the market for, or value of, any securities or payments linked to those Reference Rates. Any substitute Reference Rate and any pricing adjustments imposed by a regulator or by counterparties or otherwise may adversely affect the Fund's performance and/or net asset value.

Foreign Investing Risk – Investments in foreign countries are subject to currency risk and country-specific risks such as political, diplomatic, regional conflicts, terrorism, war, social and economic instability, and policies that have the effect of decreasing the value of foreign securities. Foreign countries may be subject to different trading settlement practices, less government supervision, less publicly available information, limited trading markets and greater volatility than U.S. investments.

Forward Contract Risk – Forward contracts involve a number of the same characteristics and risks as futures contracts but there also are several differences. Forward contracts are not market traded, and are not necessarily marked to market on a daily basis. They settle only at the pre-determined settlement date. This can result in deviations between forward prices and futures prices, especially in circumstances where interest rates and futures prices are positively correlated. Second, in the absence of exchange trading and involvement of clearing houses, there are no standardized terms for forward contracts. Accordingly, the parties are free to establish such settlement times and underlying amounts of a security or currency as desirable, which may vary from the standardized provisions available through any futures contract. Finally, forward contracts, as two party obligations for which there is no secondary market, involve counterparty credit risk not present with futures.

IBOR Risk - The risk that the elimination of the London Interbank Offered Rate ("LIBOR") or similar interbank offered rates ("IBORs"), such as the Euro Overnight Index Average ("EONIA"), or any other changes or reforms to the determination or supervision of such rates, could have an adverse impact on the market for, or value of, any securities or payments linked to those rates. While some instruments may contemplate a scenario where LIBOR or a similar rate is no longer available by providing for an alternative rate setting methodology, not all instruments have such fallback provisions. Moreover, the effectiveness of replacement rates is uncertain.

Information Technology Sector Risk – Investments in technology companies exposed to special risks, such as rapid advances in technology that might cause existing products to become obsolete.

Additional Disclosures

Companies in a number of technology industries are also subject to more government regulations and approval processes than many other industries. This fact may affect a company's overall profitability and cause its stock price to be more volatile. Additionally, technology companies are dependent upon consumer and business acceptance as new technologies evolve.

Interest Rate Risk – In general, the price of a debt security falls when interest rates rise. Debt securities have varying levels of sensitivity to changes in interest rates. Securities with longer maturities may be more sensitive to interest rate changes.

IPO Risk – The Fund invests in IPOs at the time of the initial offering and in post-IPO trading. The stocks of such companies are unseasoned equities lacking a trading history, a track record of reporting to investors and widely available research coverage. IPOs are thus often subject to extreme price volatility and speculative trading. These stocks may have above-average price appreciation in connection with the initial public offering prior to inclusion in the Fund. The price of stocks included in the Fund may not continue to appreciate. In addition, IPOs share similar illiquidity risks of private equity and venture capital. The free float shares held by the public in an IPO are typically a small percentage of the market capitalization. The ownership of many IPOs often includes large holdings by venture capital and private equity investors who seek to sell their shares in the public market in the months following an IPO when shares restricted by lock-up are released, causing greater volatility and possible downward pressure during the time that locked-up shares are released.

Japan Risk – The Fund may invest a significant portion of its assets in securities issued by Japanese issuers. The Japanese economy may be subject to considerable degrees of economic, political, and social instability, which could have a negative impact on Japanese securities. Since the year 2000, Japan's economic growth rate has remained relatively low, and it may remain low in the future. In addition, Japan is subject to the risk of natural disasters, such as earthquakes, volcanic eruptions, typhoons, and tsunamis, which could negatively affect the Fund.

Large Cap Stock Risk – Because the investment focus of the Fund is on large cap stocks, the value of the Fund may be more volatile than the market as a whole and can perform differently from the value of the market as a whole.

Leveraging Risk – Using derivatives can create leverage, which can magnify the Fund's potential for gain or loss and, therefore, amplify the effects of market volatility on the Fund's share price.

Limited History of Operations Risk – The Fund is a new mutual fund and has a limited history of operations for investors to evaluate.

Liquidity Risk – Some securities may have few market-makers and low trading volume, which tend to increase transaction costs and may make it impossible for the Fund to dispose of a security position at all or at a price which represents current or fair market value.

Long-Term Maturities/Durations Risk – The risk of greater price fluctuations than would be associated with securities having shorter maturities or durations.

Lower-Rated Securities Risk – Securities rated below investment-grade, sometimes called "high-yield" or "junk" bonds, are speculative investments that generally have more credit risk than higher-rated securities. Companies issuing high-yield fixed-income securities are not as strong financially as those issuing securities with higher credit ratings and are more likely to encounter financial difficulties. Lower rated issuers are more likely to default, and their securities could become worthless.

Management Risk – The Fund is subject to management risk because it is an actively managed investment portfolio. The Sub-Adviser will apply its investment techniques and risk analyses in making investment decisions for the Fund, but there is no guarantee that its decisions will produce the intended result. The successful use of hedging and risk management techniques may be adversely affected by imperfect correlation between movements in the price of the hedging vehicles and the securities being hedged.

Merger and Event-Driven Risk – Investments in companies that are expected to be, or already are, the subject of a publicly announced merger, takeover, tender offer, leveraged buyout, spin-off, liquidation or other corporate reorganizations carry the risk that the proposed or expected corporate event may not be completed or may be completed on less favorable terms than originally expected.

Micro Capitalization Risk – The purchase or sale of more than a limited number of shares of the securities of a micro-cap company may affect its market price. Micro-cap companies are generally followed by few, if any, securities analysts, and there tends to be less publicly available information about them. Their securities generally have even more limited trading volumes and are subject to even more abrupt or erratic market price movements than small and mid-capitalization companies. Such companies may also have limited markets, financial resources, or product lines, may lack management depth and may be more vulnerable to adverse business or market developments.

Additional Disclosures

Money Market/Short-Term Securities Risk – To the extent the Fund holds cash or invests in money market or short-term securities, the Fund may be less likely to achieve its investment objective. In addition, it is possible that the Fund's investments in these instruments could lose money.

Mortgage-Backed and Asset-Backed Securities Risk – Mortgage-backed and asset-backed securities often involve risks that are different from or more acute than risks associated with other types of debt instruments. Generally, rising interest rates tend to extend the duration of fixed rate mortgage-backed securities, making them more sensitive to changes in interest rates. As a result, the Fund may exhibit additional volatility in a period of rising interest rates if it holds mortgage-backed securities (known as "extension risk"). Mortgage-backed securities may also be subject to prepayment risk; when interest rates decline, borrowers may pay off their mortgages sooner than expected. This can reduce the Fund's returns because the Fund may have to reinvest that money at the lower prevailing interest rates. Non-agency mortgage-backed securities generally have greater credit risk than government issued mortgage-backed securities.

Natural Disaster/Epidemic Risk – Natural or environmental disasters, such as earthquakes, fires, floods, hurricanes, tsunamis, and other severe weather-related phenomena generally, and widespread disease and illness, including pandemics and epidemics (such as the novel coronavirus), have been and can be highly disruptive to economies and markets.

Non-Diversification Risk – A Fund that is a non-diversified investment company means that more of the Fund's assets may be invested in the securities of a single issuer than a diversified investment company. This may make the value of the Fund's shares more susceptible to certain risk than shares of a diversified investment company. As a non-diversified fund, the Fund has a greater potential to realize losses upon the occurrence of adverse events affecting a particular issuer.

Options Risk – The Fund may use options to enhance return and or mitigate risk. However, options can fall rapidly in response to developments in specific companies or industries and the Fund's investments may be negatively impacted by unexpected market conditions.

Private Placement Risk – Privately issued securities, including those which may be sold only in accordance with Rule 144A under the Securities Act of 1933, are restricted securities that are not registered

with the U.S. Securities and Exchange Commission ("SEC"). Accordingly, the liquidity of the market for specific privately issued securities may vary. Delay or difficulty in selling such securities may result in a loss to the Fund. Privately issued securities that the Sub-Adviser determines to be "illiquid" are subject to the Fund's policy of not investing more than 15% of its net assets in illiquid securities.

Portfolio Turnover Risk – The frequency of a Fund's transactions will vary from year to year. Increased portfolio turnover may result in higher brokerage commissions, dealer mark-ups and other transaction costs and may result in taxable capital gains. Higher costs associated with increased portfolio turnover may offset gains in a Fund's performance.

Real Estate Industry Concentration Risk – By concentrating in a single sector, the Fund carries much greater risk of adverse developments in that sector than a fund that invests in a wide variety of industries. Real estate values rise and fall in response to a variety of factors, including local, regional and national economic conditions, interest rates and tax considerations.

Real Estate Investment Trust Risk – A REIT's performance depends on the types and locations of the rental properties it owns and on how well it manages those properties. A decline in rental income may occur because of extended vacancies, increased competition from other properties, tenants' failure to pay rent or poor management.

Regional/Country Risk – The Fund generally has greater exposure to market, currency, economic, political, regulatory, geopolitical, and other risks in the regions or countries where it invests. Consequently, compared with a more geographically diversified fund, it may experience increased volatility, or reductions in the value of its investments.

Senior Bank Loans Risk – Senior loans are subject to the risk that a court could subordinate a senior loan, which typically holds the most senior position in the issuer's capital structure, to presently existing or future indebtedness or take other action detrimental to the holders of senior loans. Senior loans settle on a delayed basis, potentially leading to the sale proceeds of such loans not being available to meet redemptions for a substantial period of time after the sale of the senior loans. The market prices of floating rate loans are generally less sensitive to interest rate changes than are the market prices for securities with fixed interest rates. Certain senior loans may not be considered "securities," and purchasers, such as the Fund, therefore, may not be entitled to rely on the protections of federal securities

Additional Disclosures

laws, including anti-fraud provisions.

Securities Lending Risk – The risk of securities lending is that the financial institution that borrows securities from the Fund could go bankrupt or otherwise default on its commitment under the securities lending agreement and the Fund might not be able to recover the loaned securities or their value.

Short Selling Risk – If the price of the security sold short increases between the time of the short sale and the time the Fund covers its short position, the Fund will incur a loss which may be unlimited. Also, the Fund is required to deposit collateral in connection with such short sales and may have to pay a fee to borrow particular securities.

Small and Medium Capitalization Risk – The Fund's investments in smaller and medium-sized companies carry more risks than investments in larger companies. Companies with small and medium-sized market capitalization often have narrower markets, fewer products or services to offer and more limited managerial and financial resources than larger, more established companies do. Investing in lesser-known, small and medium-sized capitalization companies involve a greater risk of volatility of the Fund's net asset value than is customarily associated with larger, more established companies. Often smaller and medium capitalization companies and the industries in which they are focused are still evolving and, while this may offer better growth potential than larger, more established companies, it also may make them more sensitive to changing market conditions.

Small Capitalization Risk – The Fund's investments in small cap companies carry more risks than investments in larger companies. Small cap companies often have narrower markets, fewer products, or services to offer and more limited managerial and financial resources than larger, more established companies do.

Software Industry Risk – Technological developments, fixed-rate pricing and the ability to attract and retain skilled employees can significantly affect the software industry. The success of companies in the industry is also subject to the continued demand for internet services.

Stock Market Risk – Stock markets can be volatile. In other words, the prices of stocks can fall rapidly in response to developments affecting a specific company or industry, or to changing economic, political or market conditions. The Fund's investment may decline in value if the stock markets perform poorly.

Structured Note Risk – Structured notes involve tracking risk, issuer default risk and may involve leverage risk.

Tactical Asset Allocation Risk – Tactical asset allocation is an investment strategy that actively adjusts a portfolio's asset allocation. The Fund's tactical asset management discipline may not work as intended. The Fund may not achieve its objective and may not perform as well as other funds using other asset management styles, including those based on fundamental analysis (a method of evaluating a security that entails attempting to measure its intrinsic value by examining related economic, financial and other factors) or strategic asset allocation (a strategy that involves periodically rebalancing the portfolio in order to maintain a long-term goal for asset allocation). The Sub-Adviser's evaluations and assumptions in selecting investments may be incorrect in view of actual market conditions and may result in owning securities that underperform other securities.

Upside Participation Risk/Downside Loss Risk – There can be no guarantee that the Fund will be successful in its strategy to provide shareholders with a total return that matches the increase of the underlying index over a given period. In the event an investor purchases shares of the Fund after securities transactions were entered into or does not stay invested in the Fund for the long term or a full-market cycle, the returns realized by the investor may not match those that the Fund seeks to achieve.

In addition, there can be no guarantee that the Fund will be successful in its strategy to provide protection against underlying index losses. The Fund's strategy seeks to deliver returns that participate in the returns of the underlying index while limiting downside losses if shares are held over long periods of time. The Fund does not provide principal protection or non-principal protection, and an investor may experience significant losses on its investment, including the loss of its entire investment.

U.S. Government Securities Risk – The risk that U.S. Government securities in the Fund's portfolio will be subject to price fluctuations, or that an agency or instrumentality will default on an obligation not backed by the full faith and credit of the United States.
