

Investor Profile

For investors seeking a historically defensive fixed income alternative with a historically low correlation to traditional long-only bonds.

Investment Strategy

The Fund's Sub-Adviser seeks to achieve the Fund's investment objective versus the Bank of America Merrill Lynch 3-Month T-Bill + 3.00% by investing normally at least 80% of its assets (defined as net assets plus borrowing for investment purposes) in various credit-related instruments.

Fund Objective

The Fund seeks to maximize total return under varying market conditions through both current income and capital appreciation.

*On July 1, 2018 the Fund's principal investment strategy was materially changed. Therefore, the Fund's performance prior to this date may have been different had the current principal investment strategy been in place.

Past performance does not guarantee future results. Investment return and principal value of an investment will fluctuate, and shares, when redeemed, may be worth more or less than their original cost. Performance may vary for other share classes. The Fund's performance is subject to change since quarter's end and may be lower or higher than the performance data shown. Please call (800) 442-4358 to obtain changes to the Fund, if any as well as performance data current to the most recent month-end.

ABOUT THE SUB-ADVISER*

MetLife Investment Management, LLC ("MetLife") is located at One MetLife Way, Whippany, New Jersey 07981. MetLife is registered with the SEC as an investment adviser under the Investment Advisers Act of 1940, as amended (the "Advisers Act"). As of December 31, 2020, MetLife had approximately \$659.6 billion in assets under management.

PORTFOLIO MANAGERS

Andrew Kronschnabel, CFA

Mr. Kronschnabel is a portfolio manager and a member of the investment grade credit team. He is responsible for high grade credit across all Core-based, Corporate and Long / Short strategies at MetLife. Prior to joining MetLife in 2007, he was a member of the portfolio management team at Delaware Investments where he was responsible for Core-based and high grade products from 2000 to 2007. Mr. Kronschnabel received a Bachelor of Science degree in international economics and politics from Colorado College and is a CFA charterholder.

Joshua Lofgren, CFA

Mr. Lofgren is a portfolio manager involved in high grade credit strategies and the Long / Short credit strategy at MetLife. Prior to joining MetLife in 2012, Mr. Lofgren worked in the securities division at Goldman Sachs in New York for nine years, working with institutional clients across a range of credit products, including investment grade and high yield credit, in both cash and derivative form. Mr. Lofgren has a Bachelor of Science in Business Administration with a concentration in finance from the University of Richmond and is a CFA charterholder. Messrs. Kronschnabel and Lofgren share primary responsibility for the day-to-day investment decisions of the Fund.

PRINCIPAL INVESTMENT RISKS

Short Selling Risk – If the price of the security sold short increases between the time of the short sale and the time the Fund covers its short position, the Fund will incur a loss which may be unlimited. Also, the Fund is required to deposit collateral in connection with such short sales and may have to pay a fee to borrow particular securities.

Derivatives Risk – Financial derivatives may not produce the desired investment results because they are not perfect substitutes for the underlying securities, indices or currencies from which they are derived. Derivatives may also create leverage which will amplify the effect on the Fund, which may produce significant losses. Over the counter derivatives, such as swaps, are also subject to counterparty risk, which is the risk that the other party in the transaction will not fulfill its contractual obligation.

Leveraging Risk – Using derivatives can create leverage, which can magnify the Fund's potential for gain or loss and, therefore, amplify the effects of market volatility on the Fund's share price.

Event Risk – Event risk is the risk that corporate issuers may undergo restructurings, such as mergers, leveraged buyouts, takeovers, or similar events financed by increased debt. As a result of the added debt, the credit quality and market value of a company's bonds and/or other debt securities may decline significantly.

Credit Risk – Issuers of debt securities may suffer from a reduced ability to repay their interest and principal obligations. They may even default on interest and/or principal payments due to the Fund. An increase in credit risk or a default will cause the value of Fund debt securities to decline. Issuers with lower credit quality are more susceptible to economic or industry downturns and are more likely to default.

Changing Fixed Income Market Conditions Risk – During periods of sustained rising rates, fixed income risks will be amplified. If the U.S. Federal Reserve's Federal Open Market Committee ("FOMC") raises

the federal funds interest rate target, interest rates across the U.S. financial system may rise. Rising rates tend to decrease liquidity, increase trading costs, and increase volatility, all of which make portfolio management more difficult and costly to the Fund and its shareholders.

Call or Redemption Risk – If interest rates decline, issuers of debt securities may exercise redemption or call provisions. This may force the Fund to reinvest redemption or call proceeds in securities with lower yields, which may reduce Fund performance.

Interest Rate Risk – In general, the price of a debt security falls when interest rates rise. Debt securities have varying levels of sensitivity to changes in interest rates. Securities with longer maturities may be more sensitive to interest rate changes.

Corporate Loans Risk – Commercial banks and other financial institutions or institutional investors make corporate loans to companies that need capital to grow or restructure. Borrowers generally pay interest on corporate loans at rates that change in response to changes in market interest rates such as the London Interbank Offered Rate ("LIBOR") or the prime rates of U.S. banks. As a result, the value of corporate loan investments is generally less exposed to the adverse effects of shifts in market interest rates than investments that pay a fixed rate of interest. The market for corporate loans may be subject to irregular trading activity and wide bid/ask spreads. In addition, transactions in corporate loans may settle on a delayed basis. As a result, the proceeds from the sale of corporate loans may not be readily available to make additional investments or to meet the Fund's redemption obligations.

Long-Term Maturities/Durations Risk – The risk of greater price fluctuations than would be associated with securities having shorter maturities or durations.

Private Placement Risk – Privately issued securities including those which may be sold only in accordance with Rule 144A under the Securities Act of 1933, are restricted securities that are not registered with the U.S. Securities and Exchange Commission ("SEC"). Accordingly, the liquidity of the market for specific privately issued securities may vary. Delay or difficulty in selling such securities may result in a loss to the Fund. Privately issued securities that the Sub-Adviser determines to be "illiquid" are subject to the Fund's policy of not investing more than 15% of its net assets in illiquid securities.

Lower-Rated Securities Risk – Securities rated below investment-grade, sometimes called "high-yield" or "junk" bonds, are speculative investments that generally have more credit risk than higher-rated securities. Companies issuing high-yield fixed-income securities are not as strong financially as those issuing securities with higher credit ratings and are more likely to encounter financial difficulties. Lower rated issuers are more likely to default and their securities could become worthless.

Portfolio Turnover Risk – A higher portfolio turnover will result in higher transactional and brokerage costs and may result in higher taxes when Fund shares are held in a taxable account.

Senior Bank Loans Risk – Senior loans are subject to the risk that a court could subordinate a senior loan, which typically holds the most senior position in the issuer's capital structure, to presently existing or future indebtedness or take other action detrimental to the holders of senior loans. Senior loans settle on a delayed basis, potentially leading to the sale proceeds of such loans not being available to meet redemptions for a substantial period of time after the sale of the senior loans. The market prices of floating rate loans are generally less sensitive to interest rate changes than are the market prices for securities with fixed interest rates. Certain senior loans may not be considered "securities," and purchasers, such as the Fund, therefore may not be entitled to rely on the protections of federal securities laws, including anti-fraud provisions.

Emerging Markets Risk – Emerging market countries may have relatively unstable governments, weaker economies, and less-developed legal systems which do not protect securities holders. Emerging market economies may be based on only a few industries and security issuers may be more susceptible to economic weakness and more likely to default. Emerging market securities also tend to be less liquid.

Foreign Investing Risk – Investments in foreign countries are subject to currency risk and country-specific risks such as political, diplomatic, regional conflicts, terrorism, war, social and economic instability and policies that have the effect of decreasing the value of foreign securities. Foreign countries may be subject to different trading settlement practices, less government supervision, less publicly available information, limited trading markets and greater volatility than U.S. investments.

Natural Disaster/Epidemic Risk – Natural or environmental disasters, such as earthquakes, fires, floods, hurricanes, tsunamis, and other severe weather-related phenomena generally, and widespread disease and illness, including pandemics and epidemics (such as the novel coronavirus), have been and can be highly disruptive to economies and markets.

Liquidity Risk – Some securities may have few market-makers and low trading volume, which tend to increase transaction costs and may make it impossible for a Fund to dispose of a security position at all or at a price which represents current or fair market value.

Management Risk – The Fund is subject to management risk because it is an actively managed investment portfolio. The Sub-Adviser will apply its investment techniques and risk analyses in making investment decisions for the Fund, but there is no guarantee that its decisions will produce the intended result. The successful use of hedging and risk management techniques may be adversely affected by imperfect correlation between movements in the price of the hedging vehicles and the securities being hedged.

Securities Lending Risk – The risk of securities lending is that the financial institution that borrows securities from the Fund could go bankrupt or otherwise default on its commitment under the securities lending agreement and the Fund might not be able to recover the loaned securities or their value.

FUND CHARACTERISTICS DEFINITIONS

Max Drawdown: The largest consecutive monthly decline, measured by magnitude.

RISK CHARACTERISTICS DEFINITIONS

Annualized Standard Deviation: Measures the average deviations of a return series from its mean, and is often used as a measure of risk.
Sharpe Ratio: Measures the incremental assumed return provided by the fund for taking additional risk above risk-free rate. Higher values of the Sharpe Ratio are generally desirable.

Disclosures

Investors should consider the investment objectives, risk factors, charges, and expenses of the Dunham Funds carefully before investing. This and other important information is contained in the Fund's summary prospectus and/or prospectus, which may be obtained by contacting your financial advisor, or by calling (800) 442-4358. Please read prospectus materials carefully before investing or sending money. Investing involves risk, including possible loss of principal.

The Bank of America Merrill Lynch 3-Month U.S. Treasury Bill Index is an unmanaged index that is comprised of a single U.S. Treasury issue with approximately three months to final maturity, purchased at the beginning of each month and held for one full month.

Top 10 Holdings, Region, and Fund Sector Allocations are presented to illustrate examples of the securities, regions, and sectors in which the Fund may invest. Because they are presented as of the dates indicated and change from time to

time, they may not be representative of the Fund's current or future investments or allocations. Top 10 Holdings do not include money market investments.

The average annualized total return figures include changes in principal value, reinvested dividends and capital gains distributions. Periods of less than one year are not annualized.

Performance figures shown for N-shares only. Past performance does not guarantee future results. Investment return and principal value of an investment will fluctuate, and shares, when redeemed, may be worth more or less than their original cost. Performance may vary for other share classes. The Fund's performance is subject to change since quarter's end and may be lower or higher than the performance data shown. Please call (800) 442-4358 or log on to www.dunham.com to obtain changes to the Fund, if any, as well as performance data current to the most recent month-end.

The N share class is offered either through brokerage platforms under contractual

agreement with the Registered Investment Adviser or through Registered Investment Advisers as part of an advisory program, which includes advisory fees in addition to those presented in the prospectus.
